# Stainless Steel Unit Shelf

Stainless Steel Unit Shelves made with selectable parts to match your style and usage. Create your own functional shelf for any purpose, from laundry rack to wardrobe, bookshelf, and desk.

## Basic configuration of unit shelf

The unit shelf consists of a frame, shelf boards and cross bars. Assembly is simple and the position of the shelf boards can be adjusted at 18.5 cm intervals.

The shelf is assembled by combining the frame and the shelf boards.

You can choose from three heights.

The depth is 41 cm.

You can choose from two widths.

## Examples of unit shelf combinations

You can make your own original shelf by mixing and matching the selectable parts, such as shelf boards or frames. Create your own shelf to match your style and usage.

## Configurations Recommended by MUJI Interior Advisors

The following unit shelf configurations are recommended by MUJI Interior Advisors.

### Two unit shelves next to each other against the wall

This is a basic configuration. You can change the position of the shelf boards, add various storage items and arrange it as you like.

### Two side cabinets

This combination is good for under a window or as a counter. Creating open space below the bottom shelf by extending the legs facilitates cleaning and makes the room look bigger.

### Laundry

Your wardrobe can be stored in three ways; by "Hanging on the bar", "placing on the selves" and "putting away in the drawers".

### Small Storage Space

This is a recommended configuration of slim units for convenient storage for small space. It can meet various purposes in the kitchen, living room, laundry and other areas.

## Reference Table for Required Number of Unit Shelf Parts

To ensure a certain level of stability for Unit Shelves, a specified number of parts are required for assembly. Refer to the table below for the minimum number of parts required for your particular configuration.

Frame size				
		Large	Medium	Small
W 84 cm	Shelf Boards For Frame	3	3	2
	Cross Bar / Large	2	1	1
W 56 cm	Shelf Boards For Frame	3	3	2
	Cross Bar / Small	2	1	1

※ The stability may also vary depending on the location of the assembled parts. The stability of the unit may decrease if the shelf boards are not evenly spaced, even if more than the required number of parts are used.  
 In particular, if you do not use a shelf board at the top or bottom of the unit, or if you leave an excess space between the shelves, it may cause the unit to be unstable. Make sure to install the shelf boards evenly spaced.  
 ※ The required number of parts may vary depending on the configuration when Cross Bars are used to replace the Back Panel.

## Structure of the Stacking Shelves

Original storage furniture can be freely created by combining a basic set with additional sets. As shown below, the units can be easily linked by connecting the steel pipes within the dividers and fasten them with bolts.

### Stacking mechanism

### Example of combination and withstand load

A combination method consisting of a shelf in the upright direction and additional units linked to the side.

Withstand load: 150 kg total = 60 kg × 5 units ÷ 2

Total withstand load when shelves are combined = Withstand load of set × number of units ÷ 2

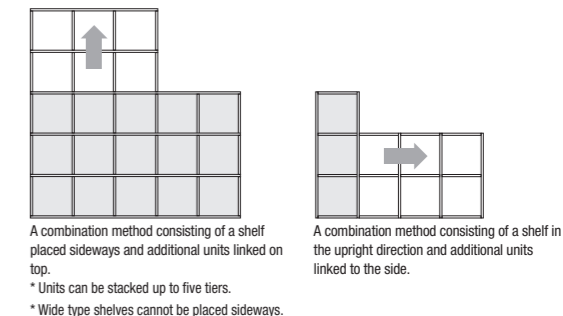

A combination method consisting of a shelf placed sideways and additional units linked on top.

Withstand load: 40 kg total = 40 kg × 2 units ÷ 2

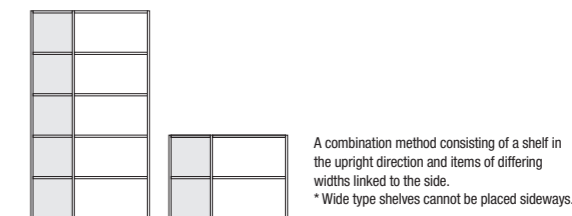

Total withstand load when shelves are combined = Withstand load of set × number of units ÷ 2

## Example of Usage

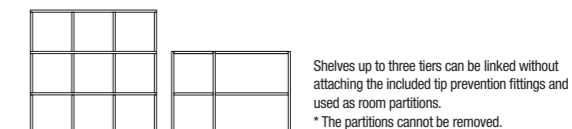

### Combination of differing tiers

### Combination of items with differing widths

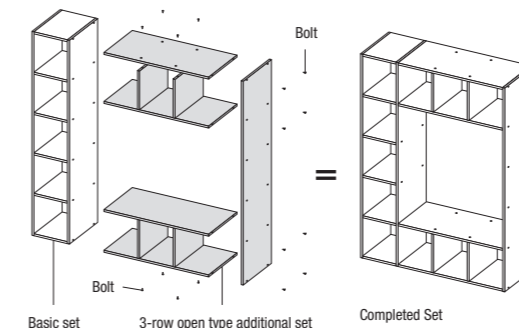

### Using as a partition

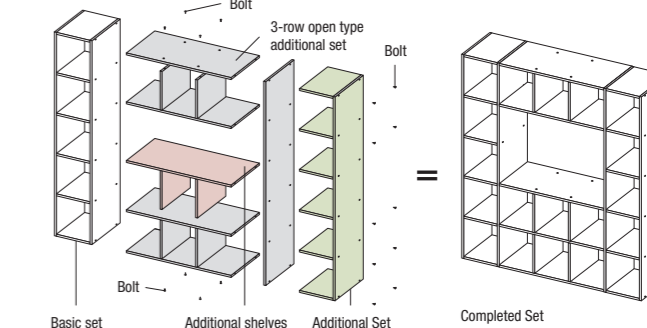

## Open Structure of the Stacking Shelf

Free storage can be created by combining open parts with steel pipes to the basic set. The combination is basically the following two patterns. (Common to 2 and 3 rows).

### Combination Pattern 1

### Combination Pattern 2

## Stacking Cabinet

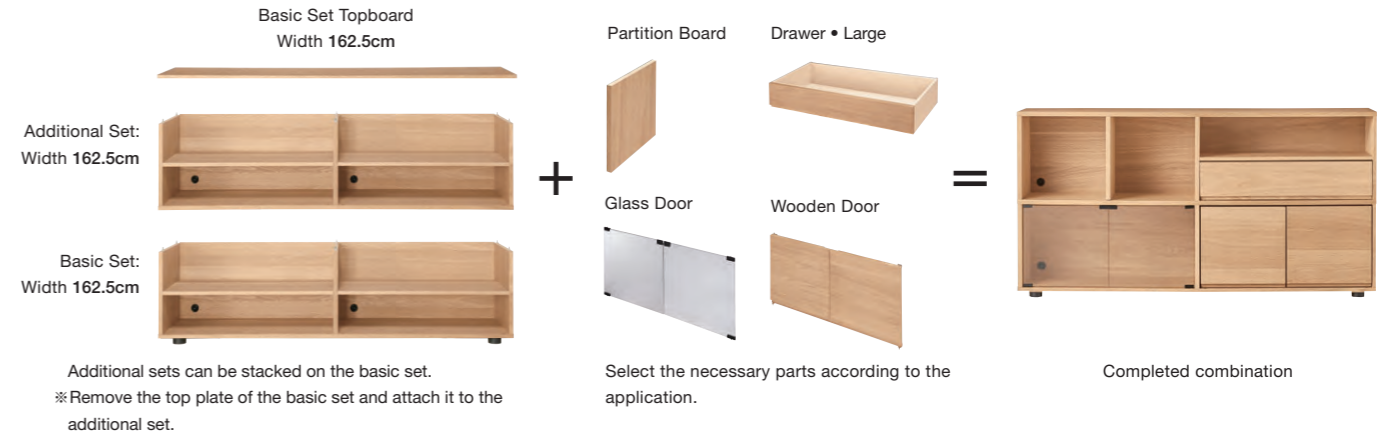

Your customized storage cabinet can be formed by combining add on items to the basic set. It can be used in various ways according to the application, as AV racks, bookshelves, living and bedroom storage shelves.

These stoppers are attachable on polypropylene cases such as Storage Box (W 40 x D 65, W 44 x D 55, and W 34 x D 44.5 cm)

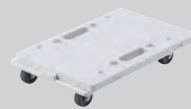

※ Using the stoppers increases the total height of all drawer type polypropylene cases by approx. 1.5 mm and other products by a maximum of 4 mm.

**Caster For PP Storage Case**  
 15523788 | Set of 4 **\$6.30**  
 These casters can be easily attached to the bottom of the following polypropylene cases by inserting the connectors into the holes.

※ Using the casters increases the total height by approx. 3.8 to 4.2 cm (exact height-increase depends on the case used).

※ Do not use casters on tatami, cushion floors, or other soft flooring in order to prevent damage to the floor.

### Country of origin of Rattan Basket

Rattan baskets sold by MUJI are made in Thai Binh province, northern Vietnam. Thai Binh province is a peaceful place with ricefields and free-range cows, buffalos, pigs, and chickens. In addition to farming, the area is also famous for its handcrafts, particularly items of woven rattan and bamboo.

### Making a Rattan Basket

The rattan, about 3-5 cm in diameter, must first be split into 5-9 mm strips before it can be used to make a basket. The rattan baskets are woven by hand, by farmers. This rattan basket takes a long time to weave, only 1-2 can be made in a day.

## Our Approach to Standard Dimensions of Modules

The standard dimensions of modules are based on "shaku", which is a unit of measurement used in the construction of Japanese homes. These dimensions are used in a wide variety of items ranging from large furniture to small storage items. For example, the height of a unit shelf is based on the height of a "kamoi" (lintel) or door, and shelf width is based on the width of a half "ken" (91 cm), so that they can fit neatly within the width of 1 "ken" (182 cm), between two columns.

### Unit shelf module dimensions "175 cm and 86 cm"

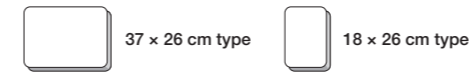

The 175 cm height corresponds the height of doors in Japanese homes. The 86 cm width is based on the "ken" (182 cm), which is a unit of measurement used in the construction of Japanese homes. "Outer width 86 cm, inner width 84 cm" which is slightly less than a half "ken" (91 cm), is a standard dimension for MUJI products.

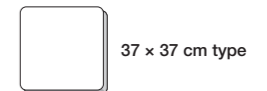

### Storage item module dimensions "37 cm and 26 cm"

Storage item modules are sized to fit neatly in storage furniture with dimensions of 175 cm and 86 cm. The module dimensions of 26 cm and 37 cm, which are designed to fit on shelves, are based on the inside dimensions of shelves (W 80 x H 35 cm).

#### Compatible storage items

These modules fit in a unit shelf or stacking shelf.

※ Do not allow the resin material to come in contact with chemicals such as alcohol, oil, thinner, polish remover, strong acid, or strong alkali, as they may cause discolouration or deformation.  
※ To prevent scratches when cleaning, avoid using cleansers, abrasive powder, or hard materials such as scouring pads.  
※ Due to the characteristics of the material, stains or smudges may be visible on the surface.  
※ To clean the resin material, gently wipe with a soft cloth soaked in a neutral detergent diluted with 50% water.  
※ Do not use an acidic detergent for cleaning. Doing so may result in deformation.
